

Is your child safe from everyday drowning hazards?

- Children under age one most often drown in bathtubs, buckets and toilets.
- Small children can drown in as little as two inches of water. They're just not strong enough to pull themselves out!

Protect your child:

- 1** Keep toddlers out of the bathroom except when supervised by an adult. Consider using a toilet seat lock.

- 2** Empty wading pools when not in use.

- 3** Remember that backyard water features (garden pools) are very attractive to young children and should be fenced.

- 4** Avoid leaving water in buckets used for cleaning, or containers used to hold ice, etc.

Turn unused containers over for storage.

- 5** Use only smaller water dishes for the family pet (not buckets).

- 6** **Never** leave a baby or toddler alone in the bath, not even for the few seconds it would take to grab a ringing phone.
- 7** Baby bath seats or bath rings should never be used.
- 8** **Learn infant and child CPR**
