

Food Safety Program

# What to Do in Case of a Food Establishment Fire

## After a Fire

1. Close immediately and stop preparing all food!
2. Contact your local health department for assistance.

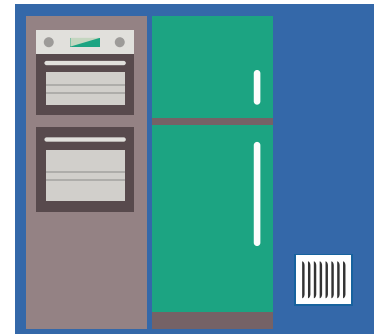

## Before Reopening

1. Verify hot and cold running water is available for handwashing and dishwashing.

2. Verify all equipment works correctly. This includes refrigeration, cooking, hot holding, and ventilation equipment.

3. Get approval from the fire department, city building department, and any other assisting agencies.

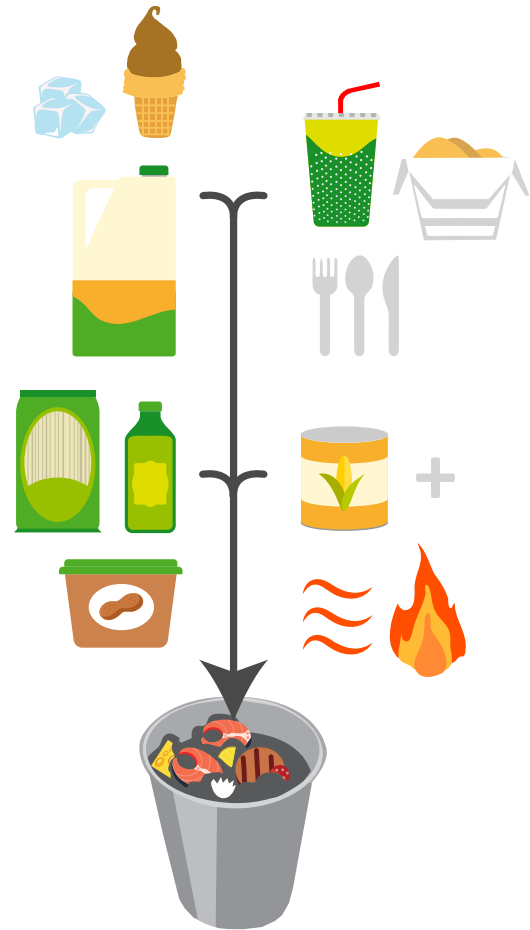

4. Contact the Health Department at 509.324.1560, ext. 2 or [foodsafetyprogram@srhd.org](mailto:foodsafetyprogram@srhd.org) to schedule a pre-opening inspection. The facility must stay closed until approved to reopen. In some cases, plan review may be required.

## Items to Discard

Heat from the fire, smoke fumes, chemicals used to fight fire, and water damage can make food unsafe to eat. Document the type and amount of food thrown away. You may be able to file an insurance claim.

- Open food, dry food and spices.
- Ice, fryer oil, and shake and ice cream mixes.
- Food stored in refrigerators and freezers. Equipment is not airtight.
- Food with permeable packaging such as cardboard, plastic wrap, screw cap jars and bottles.
- Single service items such as cups, to-go containers, napkins and straws.
- Canned food exposed to heat. You may be able to save canned food not exposed to heat. Remove the label, wash, rinse, and sanitize cans, then relabel.

## Wash, Rinse and Sanitize

Consider hiring a professional cleaning or fire restoration service.

- All food contact surfaces including utensils, silverware, dishware, pots and pans, food preparation equipment and sinks.
- Floors, walls, ceilings, vent hood, exposed pipes, and floor drains.
- Dining area tables, chairs, menus, and restrooms.
